

WHAT IS MAT?

Medication-Assisted Treatment (MAT) combines FDA-approved medications like methadone with counseling and therapy to help individuals overcome opioid addiction, including fentanyl. This approach addresses both the physical and emotional challenges of addiction by reducing cravings, managing withdrawal, and offering long-term support.

Why Choose MAT?

- **Manages Cravings and Withdrawal:** Methadone helps stabilize individuals by easing withdrawal symptoms and reducing cravings, allowing them to focus on recovery.
- **Improves Long-Term Success:** MAT pairs medication with counseling, addressing both the physical and mental aspects of addiction to promote lasting recovery.
- **Safe and Proven Effective:** MAT is a clinically tested, evidence-based treatment that has helped countless individuals reduce the risk of relapse and overdose.

At Denver Recovery Group, we offer MAT to help you or your loved ones start the path to recovery. With our expert care and support, you can regain control of your life. Contact us today to begin your journey toward healing.
